Market Review, Outlook & Strategy

June was a volatile month for global equity markets which took the cue from the many macro and geo-political events. The decision by US President Donald Trump on the US\$50b in tariffs on Chinese imports and China's subsequent retaliation spooked investors once again. As such, emerging markets were the worst affected on the back of escalating trade war tensions as money flowed back to developed markets in particular the US, on the back of a strong US dollar. A more apparent synchronized tightening of liquidity in global markets also did not help markets. The European Central Bank signaled a close to its quantitative easing program while the Fed raised rates, followed by the guidance of 2 more hikes for the rest of the year.

Domestically, foreign selling continued with total cumulative net selling of RM7b on a year to date basis. Investors were mainly concerned over short term policy uncertainty, opting to sell ahead of any potential negative news. The government was also seen undertaking GLC reform initiatives following the resignation of heads in Telekom Malaysia, MRCB, Malaysian Airports and the chairman of PNB. The Government also announced Datuk Nor Shamsiah as the new Bank Negara governor following Tan Sri Muhammad Ibrahim's resignation. Following the retracement in oil prices which came under pressure from a proposed initiative by Opec and Russia to ease up on global supply cuts despite softening demand, the Ringgit depreciated in tandem to above RM4/US\$ level.

During the month, the KLCI fell by 2.8% mom to close at 1,691.50pts on the back of a heavy sell down in the banking and telco sectors. Similarly broader markets also fell in tandem. FTSE Emas fell 1.4% mom in June and FTSE Emas Shariah was down by 0.7% mom, FTSE Bursa Small Cap index posted an increase of 1.5% mom in June as it had fallen substantially much earlier. The Ringgit depreciated by 1.5% mom against the US\$ to 4.0385.

Going forward, regional markets are expected to be volatile in the second half of the year due to short term uncertainties especially as trade war brick bats between the two super powers continue whilst China's economy is starting to slow down. Domestically markets will also be volatile taking its cue from the region compounded by the ongoing review on mega projects, higher minimum wages, potential break up of monopolies and possible downgrade of corporate earnings. Among the key events to watch for will be the upcoming Budget 2019 in November as well as new policies introduced following the formation of the new cabinet. However, a volatile market does offer buying opportunities and themes that we still like are: 1) rising consumerism following more positive consumer sentiment, 2) elevated crude oil prices and 3) blue chips with defensive earnings quality that offers steady dividend yield.

HLA Venture Flexi Fund (HLAVFF)

Actual Annual Investment Returns for the Past Five (5) Calendar Years

Year	2013	2014	2015	2016	2017
Benchmark	10.5%	-5.7%	-3.9%	-3.0%	9.5%
HLAVFF- Gross	24.1%	-3.9%	12.2%	-2.4%	30.6%
HLAVFF - Net	20.8%	-5.0%	9.8%	-3.7%	26.7%

Net returns are adjusted for tax and fund management fees.

Those are the actual returns in the past five (5) years, or since inception if shorter, and are strictly the performance of the investment-linked fund. Thus, the returns are not earned on the actual premium paid of the investment-linked product.

Investment Risks

All investments carry risks. Policy Owners must be prepared to accept certain degree of risk associated with this Investment. The following are the non-exhaustive list of risks associated to this fund.

1. Market Risk

Market risk stems from the fact that there are other economy-wide perils, which threaten all businesses. It is mainly caused by uncertainties in the economy, political and social environment.

2. Liquidity Risk

Liquidity risk is the risk that the fund invested cannot be readily sold and converted into cash. This may arise when the trading volume is low and/or where there is a lack of demand for the security.

3. Credit Risk

This refers to the possibility that the issuer of a security will not be able to make timely payments of interest or principal repayment on the maturity date. The default may lead to a fall in the value of the funds.

4. Interest Rate Risk

The level of interest rates has an impact on the value of investments. Any increase in rates will lead to a fall in the value of securities, thus affecting the value of the funds.

5. Country Risk

The foreign investment of a fund may be affected by the political & economic conditions of the country which the investments are made.

6. Currency Risk

This risk is associated with investments that are denominated in foreign currencies. Fluctuation in foreign exchange rates will have an impact on the value of the funds.

Risk Management

The Company has in place its Authorized Investment Framework which forms part of the Risk Management process. The authority framework will cover the nature and scope of the investment authority that is exercisable by various parties in managing the Company's investments. Besides this, sensitivity and stress testing is conducted to inform the Company's management the profit & loss profiles of their investments under different pre-defined risk scenarios and the necessary action to be taken if the potential losses exceed the Company's risk tolerance level.

Basis of Unit Valuation

- The assets of every fund are to be valued to determine the value at which units of a particular fund can be liquidated or purchased for investment purposes.
- The unit price of a unit of a fund shall be determined by the Company but in any event shall not be less than the value of fund of the relevant fund (as defined below), divided by the number of units of the given fund in issue on the business day before the valuation date, and the result adjusted to the nearest one hundredth of a cent.
- The maximum value of any asset of any fund shall not exceed the following price:
 - The last transacted market price at which those assets could be purchased or sold on the business day before the valuation date; or
 - In the case of securities for which market values are not readily available, the price at which, in our Investment Manager's opinion, the asset may have been purchased on the business day before the valuation date; plus any expenses which would have been incurred in its acquisition.
- To ensure fair treatment to all unit holders, the cost of acquiring and disposing of assets is recouped by making a transaction cost adjustment to the net asset value per unit.

Exceptional Circumstances

The Company reserves the right to defer the payment of benefits (other than death benefit) under this Policy for a period not exceeding six (6) months from the date the payment would have been normally effected if not for intervening events such as temporary closure of any Stock Exchange in which the fund is invested which the Company, in its discretion, may consider exceptional.

Basis of Calculation of Past Performance

The historical performance of the fund is calculated based on the price difference over the period in consideration compared to the older price of the period in consideration.

$$\frac{\text{Unit Price}_t - \text{Unit Price}_{t-1}}{\text{Unit Price}_{t-1}}$$

Others
