

Hong Leong SMART Growth Fund (HLSGF)

January 2023

Fund Features

1. Investment Objective

The primary objective of the fund is to provide investors with steady long-term capital growth at moderate risk.

2. Investment Strategy & Approach

The strategy is to provide investors an access into a diversified portfolio of growth stocks listed on Bursa Malaysia and/or in any foreign stock exchanges that offer potential capital appreciation at moderate risk. The fund may feed into collective investment schemes that meet the fund's objective. At inception, HLSGF will invest by feeding into Kenanga Growth Fund ("Target Fund") with the option to increase the number of funds or replace the Target Fund in future. The Target Fund's assets are actively invested in a diversified portfolio of Malaysian equity and equity-related securities, such as warrants and convertible loan stocks which are capable of being converted into new shares. The Target Fund may invest up to 25% of the Fund's NAV in foreign capital markets, which may include but not limited to Singapore, Indonesia, Thailand, Philippines, Vietnam, India, Hong Kong, China, Japan, Korea, Taiwan, Australia, United States of America and any other Eligible Markets where the regulatory authority is an ordinary or associate member of the International Organization of Securities Commissions. The Target Fund does not have an active asset allocation strategy but seeks to manage portfolios by investing in companies that satisfy the criteria of having a sustainable and credible business model, and are also trading at a discount to their intrinsic value. However, under conditions of extreme market volatility and/or when the market is trading at valuations deemed unsustainable, the Fund will seek to judiciously scale back its equity exposure.

3. Asset Allocation

Under normal market conditions, the Target Fund's equity exposure is expected to range from 75% to 95% of the Target Fund's NAV with the balance in money market instruments, fixed deposits and/or cash.

4. Target Market

This fund is suitable for investors who have long term investment time horizon and have a moderate risk profile with tolerance for short-term periods of volatility.

Hong Leong SMART Growth Fund (HLSGF)

Market Review, Outlook & Strategy relevant to Target Fund

In January, Nasdaq surged 10.7%, followed by S&P500 and Dow Jones Index at 6.2% and 2.8% respectively. The gains were mainly driven by stronger-than-expected economic data, and 4Q22 earnings results that were not as bad as feared with price reactions mostly positive. The US reported 4Q Gross Domestic Product (GDP) growth of 2.9% quarter-on-quarter (QoQ) seasonally adjusted annual rate (SAAR) or +1% year-on-year (YoY), stronger than expected. Additionally, jobless claims fell to 182k (back to April 2022 level and all-time lows), increasing views of a soft landing in US. Further, the unemployment rate fell to 3.4% in January (Dec 3.5%). Consensus growth forecast for the US has been revised up to 0.5% YoY for 2023, from 0.3%. The annual inflation rate in the US slowed for a sixth straight month to 6.5% YoY in December 2022 (Nov 7.1%, Oct 7.7%), the lowest since October 2021, in line with market forecasts. Consensus expects the Consumer Price Index (CPI) to moderate to 3.8% in 2023. The US Federal Reserve (Fed) hiked 25 basis points (bps) in February as expected, and consensus is expecting rates to peak at around 5.0% by mid-2023.

The Euro STOXX 50 surged 9.8% in January, closely tracking Wall Street gains. The European Central Bank (ECB) confirmed expectations of a 50bp hike, taking its key ratio to 2.5%. Another 50bp hike is expected in March, and consensus is expecting rates to peak at around 3.5% by end-2023. Decisions at future meetings will be data-dependent. Inflation across Europe dropped by the third consecutive month in January to 8.5% (Dec 9.2%) led by falling energy prices, according to preliminary data by Eurostat. The ECB in December also announced that from March, it would begin to reduce its EUR5 trillion balance sheet by EUR15 billion per month on average until the end of June 2023.

In Asia, China/Hong Kong, Taiwan and Korea outperformed while ASEAN markets lagged. Outperformers were China/Hong Kong (HSI +10.7%), Taiwan (TWSE +8.0%), Korea (KOSPI +8.4%). Underperformers were India (SENSEX -2.1%), Indonesia (JCI -0.2%), and Thailand (SET +0.2%). In China, reopening of borders from the 8th of January and substantial easing of Covid restrictions propelled stocks higher. Policy makers also increased monetary stimulus and enacted support for the property market. Economic development remains a top priority, with 2023 GDP forecasted to rebound to 4.9% from 3.0% in 2022. The official non-manufacturing/manufacturing Purchasing Managers' Index (PMI) soared to 54.4/50.1 from 41.6/47.0 in December, despite fewer working days given Lunar New Year holidays. China's strong rebound provides a cushion for softening global growth, but risks adding inflationary pressure on most economies.

Locally, the FBM KLCI decreased by 0.7% in January to 1,485, after closing the year at 1,495. The FBM100, FBM Small Cap and FBM Shariah index increased by 0.6%, 8.3% and 1.3% respectively on improved global sentiment and lower political uncertainty domestically. On the monetary policy front, Bank Negara Malaysia (BNM) unexpectedly maintained the Overnight Policy Rate (OPR) at 2.75% during the January 2023 Monetary Policy Committee (MPC) meeting. Consensus now expects zero or 25bps rate hike this year for OPR to reach 2.75%-3.00% by end-2023.

On fund flows, foreign investors stayed net sellers in the month of January at RM201m. The 3 bestperforming sectors in January were Energy (+14.3%), Transport (+11.7%), and Technology (+6.4%). The 3 worst performing sectors were Healthcare (-3.7%), Plantation (-3.6%), and Finance (-0.5%).

Global markets continue to remain volatile, as growth data and economic outlook in the developed markets remain mixed. Nonetheless should inflation continue to decline, the Fed could signal a pause or a more accommodative stance which would be positive for market sentiment. We adopt a more balanced strategy, with a focus on selecting companies with strong fundamentals and cash flow generation abilities.

Domestically, Malaysia continues to benefit from robust domestic economic activity (with 4% GDP growth forecasted for 2023) and controlled inflation via subsidies. China's reopening and rebounding growth should also be positive for Malaysia given the strong trade and investment links between the 2 countries in addition to the return of tourists from China. With the conclusion of the General Election and removal of the uncertainty factor, investors could have more confidence to deploy capital. Further evidence of pro-growth policies and fiscal consolidation will provide additional catalysts.

Actual Annual Investment Returns for the Past Ten (10) Calendar Years

Net returns are adjusted for tax and fund management fees.

Those are the actual returns in the past ten (10) years, or since inception if shorter, and are strictly the performance of the investment-linked fund. Thus, the returns are not earned on the actual premium paid of the investment-linked product.

Year	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022
Benchmark	10.5%	-5.7%	-3.9%	-3.0%	9.5%	-5.9%	-6.0%	2.4%	-3.7%	-4.6%
HLSGF- Gross	27.8%	11.8%	23.1%	2.3%	27.1%	-16.8%	15.0%	10.3%	17.1%	-11.1%
HLSGF - Net	24.1%	9.3%	19.8%	0.6%	23.5%	-17.0%	12.3%	8.0%	14.0%	-11.6%

Notice: Past performance of the fund is not an indication of its future performance.

The fund was only launched on 1 October 2012. The actual investment returns are calculated based on unit price from 1 October 2012 to 31 December 2012.

Investment Risks

All investments carry risks. Policy Owners must be prepared to accept certain degree of risk associated with this investment. The following are the non-exhaustive list of risks associated to this fund.

- Market Risk**
Market risk stems from the fact that there are other economy-wide perils, which threaten all businesses. It is mainly caused by uncertainties in the economy, political and social environment.
- Liquidity Risk**
Liquidity risk is the risk that the fund invested cannot be readily sold and converted into cash. This may arise when the trading volume is low and/or where there is a lack of demand for the security.
- Credit Risk**
This refers to the possibility that the issuer of a security will not be able to make timely payments of interest or principal repayment on the maturity date. The default may lead to a fall in the value of the funds.
- Interest Rate Risk**
The level of interest rates has an impact on the value of investments. Any increase in rates will lead to a fall in the value of securities, thus affecting the value of the funds.
- Country Risk**
The foreign investment of a fund may be affected by the political & economic conditions of the country which the investments are made.

Hong Leong SMART Growth Fund (HLSGF)

6. Currency Risk

This risk is associated with investments that are denominated in foreign currencies. Fluctuation in foreign exchange rates will have an impact on the value of the funds.

7. Concentration Risk

This risk is associated with a feeder fund whereby the investments of such fund are not diversified. A feeder fund invests mainly into another collective investment scheme.

8. Warrant and Convertible Loan Stock Risk

The price of the warrant and convertible loan stock are typically linked to the underlying stock. However, it generally fluctuates more than the underlying stocks due to the greater volatility of the warrants market. The fluctuation may have a great impact on the value of the funds. Generally, as the warrants have a limited life, they will depreciate in value as they approach their maturity date, assuming that all other factors remain unchanged. Warrants that are not exercised at maturity become worthless and negatively affect the NAV of the Fund. Convertible loan stocks must be converted to the underlying stock at a predetermined conversion ratio and conversion rate, and in the event the total costs of converting into underlying stock is higher than the market price of that the underlying stock, it will negatively affect the NAV of the Fund.

Risk Management

The company has in place its Authorized Investment Framework which forms part of the Risk Management process. The authority framework covers the nature and scope of the investment authority that is exercisable by various parties in managing the Company's investments. The potential investment risks that are taken into consideration in managing the fund include economic conditions, liquidity, qualitative and quantitative aspects of the securities. The investment manager(s) have put in place the following controls to reduce the risks through:

- having a flexible tactical asset allocation
- investing in a wide range of companies across different sectors
- setting prudent investment limits on various exposures
- taking into account the liquidity factor in selecting securities
- engaging in the hedging of foreign currency exposure where appropriate

Basis of Unit Valuation

- The assets of every fund are to be valued to determine the value at which units of a particular fund can be liquidated or purchased for investment purposes.
- The unit price of a unit of a fund shall be determined by the Company but in any event shall not be less than the value of fund of the relevant fund (as defined below), divided by the number of units of the given fund in issue on the business day before the valuation date, and the result adjusted to the nearest one hundredth of a cent.
- The maximum value of any asset of any fund shall not exceed the following price:
 - The last transacted market price at which those assets could be purchased or sold on the business day before the valuation date; or
 - In the case of securities for which market values are not readily available, the price at which, in our Investment Manager's opinion, the asset may have been purchased on the business day before the valuation date; plus any expenses which would have been incurred in its acquisition.
- To ensure fair treatment to all unit holders, the cost of acquiring and disposing of assets is recouped by making a transaction cost adjustment to the net asset value per unit.

Exceptional Circumstances

The Company reserves the right to defer the payment of benefits (other than death benefit) under this Policy for a period not exceeding six (6) months from the date the payment would have been normally effected if not for intervening events such as temporary closure of any Stock Exchange in which the fund is invested which the Company, in its discretion, may consider exceptional.

Target Fund Details

Kenanga Growth Fund is an Equity fund managed by Kenanga Investors Berhad. The past performance of this fund is as follows:

Year	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022
Performance	26.4%	9.3%	20.9%	-0.1%	25.8%	-18.1%	13.5%	8.9%	14.4%	-12.7%

Basis of Calculation of Past Performance

The historical performance of the fund is calculated based on the price difference over the period in consideration compared to the older price of the period in consideration.

$$\frac{\text{Unit Price}_t - \text{Unit Price}_{t-1}}{\text{Unit Price}_{t-1}}$$

For the underlying Target Fund, past performance is calculated after adjusting for distribution and/or additional units, if any.
