Market Review, Outlook & Strategy

Equities across the region traded mixed at the start of the month as investors fled risky assets in favour of safety due to rising geopolitical worries over North Korea and Syria. Market participants were also concerned that the Fed will begin to reduce the size of its USD\$4.5 trillion stockpile of government and mortgage-backed bonds later this year. However, towards the later part of the month, the market-friendly outcome of the first round of the French presidential election and the long-awaited list of objectives of a US tax overhaul that was unveiled by President Trump's economic adviser helped boost equity markets. Asian markets were also supported by robust Chinese economic data in 1Q17, indicating that the economy is stabilizing.

April was also a good month for Malaysia as the KLCI rose to a 22-month high on the back of a stronger ringgit, recovering corporate earnings prospects and foreign funds inflow. The announcement of another PNB corporate exercise with the proposed acquisition of I&P Group by SP Setia also helped to boost interest in the market. During the month, headline inflation for Malaysia accelerated to 5.1% yoy from 4.5% in February due to higher cost of transportation and fuel prices. The Ringgit also strengthened against the US\$ from 4.4255 as at end March to 4.3410 as at end April.

As such for the month, the KLCI rose 1.6% or 28pts to close at 1,768pts. The broader market outperformed the KLCI, with the FBM Emas up 2.2% mom to 12,631pts. The finance and technology sectors outperformed the market. KLFIN and KLTEC index gained 4.1% and 8% mom to close at 16,301 pts and 32.85 pts, respectively. Average daily value traded on Bursa in April fell 8% mom to RM2.8bn.

In May, investors will be focusing on the March 2017 quarter results following three years of earnings stagnation. Bank Negara will also be issuing its Monetary Policy Statement this month where consensus generally expects no change to the Overnight Policy Rate. External events that may sway the market would include the second round of the French Presidential Election on 7th May and the OPEC meeting on 25th May. In terms of strategy, we will continue to buy selected stocks on market dips as we continue to be positive on the market, at the same time realizing some gains on the outperformers. Reaffirmation of revenue and earnings growth in the current reporting season would be the next catalyst for the next leg-up of re-rating. Sectors we like include; 1) Construction, 2) Finance, 3) Reflation and 4) Tourism.

HLA Venture Dana Putra (HLAVDP)

Actual Annual Investment Returns for the Past Five (5) Calendar Years

Year	2012	2013	2014	2015	2016
Benchmark	11.9%	13.3%	-4.2%	2.4%	-6.1%
HLAVDP- Gross	10.0%	32.6%	-1.1%	4.9%	-2.4%
HLAVDP - Net	7.8%	28.6%	-2.4%	3.1%	-3.6%

Net returns are adjusted for tax and fund management fees.

Those are the actual returns in the past five (5) years, or since inception if shorter, and are strictly the performance of the investment-linked fund. Thus, the returns are not earned on the actual premium paid of the investment-linked product.

Investment Risks

All investments carry risks. Policy Owners must be prepared to accept certain degree of risk associated with this Investment. The following are the detailed explanation of the risk associated to this fund.

1. Market Risk

Market risk stems from the fact that there are other economy-wide perils, which threaten all businesses. It is mainly caused by uncertainties in the economy, political and social environment.

2. Liquidity Risk

Liquidity risk is the risk that the fund invested cannot be readily sold and converted into cash. This may arise when the trading volume is low and/or where there is a lack of demand for the security.

3. Credit Risk

This refers to the possibility that the issuer of a security will not be able to make timely payments of interest or principal repayment on the maturity date. The default may lead to a fall in the value of the funds.

4. Interest Rate Risk

The level of interest rates has an impact on the value of investments. Any increase in rates will lead to a fall in the value of securities, thus affecting the value of the funds.

Risk Management

The Company has in place its Authorized Investment Framework which forms part of the Risk Management process. The authority framework will cover the nature and scope of the investment authority that is exercisable by various parties in managing the Company's investments. Besides this, sensitivity and stress testing is conducted to inform the Company's management the profit & loss profiles of their investments under different pre-defined risk scenarios and the necessary action to be taken if the potential losses exceed the Company's risk tolerance level.

Basis of Unit Valuation

- The assets of every fund are to be valued to determine the value at which units of a particular fund can be liquidated or purchased for investment purposes.
- The unit price of a unit of a fund shall be determined by the Company but in any event shall not be less than the value of fund of the relevant fund (as defined below), divided by the number of units of the given fund in issue on the business day before the valuation date, and the result adjusted to the nearest one hundredth of a cent.
- The maximum value of any asset of any fund shall not exceed the following price:
 - The last transacted market price at which those assets could be purchased or sold on the business day before the valuation date; or
 - In the case of securities for which market values are not readily available, the price at which, in our Investment Manager's opinion, the asset may have been purchased on the business day before the valuation date; plus any expenses which would have been incurred in its acquisition.
- To ensure fair treatment to all unit holders, the cost of acquiring and disposing of assets is recouped by making a transaction cost adjustment to the net asset value per unit.

Exceptional Circumstances

The Company reserves the right to defer the payment of benefits (other than death benefit) under this Policy for a period not exceeding six (6) months from the date the payment would have been normally effected if not for intervening events such as temporary closure of any Stock Exchange in which the fund is invested which the Company, in its discretion, may consider exceptional.

Basis of Calculation of Past Performance

The historical performance of the fund is calculated based on the price difference over the period in consideration compared to the older price of the period in consideration.

$$\frac{\text{Unit Price}_t - \text{Unit Price}_{t-1}}{\text{Unit Price}_{t-1}}$$

Others
