## Market Review, Outlook & Strategy

Asian markets were initially lackluster with renewed worries over the various European national elections. Adding to the concerns was Trump's unpredictable statements and policies which continued to press on with a protectionist agenda without elaborating on the details. Oil prices also consolidated due to growing stockpiles in the US and signs of higher output from US shale producers. However, sentiment reversed when Wall Street established new record levels led by financials after the Federal Reserve chairman Janet Yellen indicated that the central bank may hike interest rates in the upcoming policy meeting. Economic data from China is also indicating that the second largest economy in the world is stabilizing.

On the local bourse, attention was focused on the earnings season. It was generally a better set of results with more companies meeting expectations, suggesting that earnings have troughed. As such, earnings may finally stage a modest recovery in 2017 after three long years of contraction. Another notable key event was Saudi Aramco announcing that it will take up a 50% stake in the refinery and cracker project in the Pengerang Integrated Complex (PIC) in Johor under a US\$7b deal with Petronas. This is positive for Petronas as the additional cash flow arising from the monetization of its assets comes in handy to support its domestic capex.

For the month, the KLCI gained 1.3% or 22pts to close at 1,694pts. The KLCI rallied to a high of 1,692.22 before consolidating lower on profit taking. The broader market outperformed, with the FBM Emas gaining 1.8% mom to 11,950pts. Small caps also outperformed the KLCI with the FBM Small cap index jumping 2.2% to 15,764pts. Average daily value traded on Bursa in February increased 31% mom to RM2.53bn.

While we are hopeful for better market conditions after 3 years of contraction, we would be mindful of volatility in the global markets caused by political issues. We continue to be cautiously optimistic and would look to buy on any weakness companies that are trading at attractive valuations. The strategy remains to stick to our thematic of: 1) construction, 2) tourism, 3) asset reflation 4) financials and 5) GLC reform plays.

## Actual Annual Investment Returns for the Past Five (5) Calendar Years

Year	2012	2013	2014	2015	2016
Benchmark	11.9%	13.3%	-4.2%	2.4%	-6.1%
HLAVDP- Gross	10.0%	32.6%	-1.1%	4.9%	-2.4%
HLAVDP - Net	7.8%	28.6%	-2.4%	3.1%	-3.6%

Net returns are adjusted for tax and fund management fees.

Those are the actual returns in the past five (5) years, or since inception if shorter, and are strictly the performance of the investment-linked fund. Thus, the returns are not earned on the actual premium paid of the investment-linked product.

### Investment Risks

All investments carry risks. Policy Owners must be prepared to accept certain degree of risk associated with this Investment. The following are the detailed explanation of the risk associated to this fund.

#### 1. Market Risk

Market risk stems from the fact that there are other economy-wide perils, which threaten all businesses. It is mainly caused by uncertainties in the economy, political and social environment.

#### 2. Liquidity Risk

Liquidity risk is the risk that the fund invested cannot be readily sold and converted into cash. This may arise when the trading volume is low and/or where there is a lack of demand for the security.

#### 3. Credit risk

This refers to the possibility that the issuer of a security will not be able to make timely payments of interest or principal repayment on the maturity date. The default may lead to a fall in the value of the funds.

#### 4. Interest Rate Risk

The level of interest rates has an impact on the value of investments. Any increase in rates will lead to a fall in the value of securities, thus affecting the value of the funds.

### Risk Management

The Company has in place its Authorized Investment Framework which forms part of the Risk Management process. The authority framework will cover the nature and scope of the investment authority that is exercisable by various parties in managing the Company's investments. Besides this, sensitivity and stress testing is conducted to inform the Company's management the profit & loss profiles of their investments under different pre-defined risk scenarios and the necessary action to be taken if the potential losses exceed the Company's risk tolerance level.

### Basis of Unit Valuation

- The assets of every fund are to be valued to determine the value at which units of a particular fund can be liquidated or purchased for investment purposes.
- The unit price of a unit of a fund shall be determined by the Company but in any event shall not be less than the value of fund of the relevant fund (as defined below), divided by the number of units of the given fund in issue on the business day before the valuation date, and the result adjusted to the nearest one hundredth of a cent.
- The maximum value of any asset of any fund shall not exceed the following price:
  - The last transacted market price at which those assets could be purchased or sold on the business day before the valuation date; or
  - In the case of securities for which market values are not readily available, the price at which, in our Investment Manager's opinion, the asset may have been purchased on the business day before the valuation date; plus any expenses which would have been incurred in its acquisition.
- To ensure fair treatment to all unit holders, the cost of acquiring and disposing of assets is recouped by making a transaction cost adjustment to the net asset value per unit.

### Exceptional Circumstances

The Company reserves the right to defer the payment of benefits (other than death benefit) under this Policy for a period not exceeding six (6) months from the date the payment would have been normally effected if not for intervening events such as temporary closure of any Stock Exchange in which the fund is invested which the Company, in its discretion, may consider exceptional.

### Basis of Calculation of Past Performance

The historical performance of the fund is calculated based on the price difference over the period in consideration compared to the older price of the period in consideration.

$$\frac{\text{Unit Price}_t - \text{Unit Price}_{t-1}}{\text{Unit Price}_{t-1}}$$

### Others

HLA Venture Dana Putra is managed by Hong Leong Assurance Berhad (HLA). Any amount invested in this fund is invested by HLA on behalf of Policy Owner in equity, fixed income, collective investment scheme, foreign asset, derivatives and money market instrument/s. If the financial institutions and/or corporations issuing the equity, fixed income, collective investment scheme, foreign asset, derivatives and money market instruments defaults or insolvent, the Policy Owner risks losing part or all of his/her amount that were invested into the instruments on his/her behalf by HLA.

**THIS IS AN INSURANCE PRODUCT THAT IS TIED TO THE PERFORMANCE OF THE UNDERLYING ASSETS, AND IS NOT A PURE INVESTMENT PRODUCT SUCH AS UNIT TRUSTS.**
