Market Review, Outlook & Strategy

Global investment sentiment started off the month weak as the tussle for trade leverage continued between the US and China. However, sentiment started to improve when the Chinese President, Xi Jinping reaffirmed his commitment to more open trade at the Boao Forum in China, possibly paving way for better relations between the two countries.

Oil markets also received a boost as prices appreciated on the back of talks over possible sanctions on Iran, Saudi Arabia's energy minister reaffirming their commitment to prevent another supply glut and increased geopolitical tensions between US and Russia over suspected chemical attacks on Syrian civilians. In addition, industry sources were quoted as saying that Saudi Arabia is hoping that oil prices would rise to US\$80/ barrel or may even touch US\$100/barrel in the near future. Meanwhile, markets started to recover on the back of better than expected US corporate earnings. The Chinese economy expanded 6.8% yoy in the 1Q, which was ahead of expectations.

Domestically the Prime Minister Datuk Seri Najib Tun Razak announced the dissolution of Parliament, paving the way for the long anticipated 14th General Elections (GE14) which will take place on 9th May. Bursa Malaysia also initiated the intraday short-selling framework for all investors on 16th April. On the economic front, March inflation was softer than expected at +1.3% yoy but the overall underlying trend remains broadly positive in 1Q18. Notable news included MyHSR Corp appointing the MRCB-Gamuda consortium and Syarikat Pembinaan Yeoh Tiong Lay Sdn Bhd – TH Properties consortium as the PDP's for the KL-SG HSR civil works portion.

During the month, the KLCI gained 0.4% mom to close at 1,870pts. The KLCI continued to outperform the broader market for the fourth consecutive month in 2018. FTSE Emas fell 0.1% mom, FTSE Bursa Small Cap index posted an even larger decline of 1.9% mom while the FTSE Emas Shariah was down by 0.5% mom. Foreigners turned net buyers (RM1.5b) vs net sellers of RM0.1b in March. The Ringgit depreciated by 1.6% mom against the US\$ to 3.9235.

On the local front, investors will be watching for the outcome of GE14 which is closely contested, preferring to stay on the sidelines till after 9 May. Investors will also be tracking the upcoming 1Q18 results reporting season as well as 1Q18's GDP growth. Bank Negara Malaysia (BNM) will also be meeting this month and consensus is expecting that the overnight policy rate will remain unchanged at 3.25%. The current broad market correction presents an opportunity for the portfolio to reposition itself structurally. We will continue to seek cover in quality big cap stocks that offer earnings certainty and stable dividend yield. However we will also nibble on selected small-mid cap names which have been sold down irrationally where the stock specific fundamentals and management quality remain strong.

HLA Venture Dana Putra (HLAVDP)

Actual Annual Investment Returns for the Past Five (5) Calendar Years

Year	2013	2014	2015	2016	2017
Benchmark	13.3%	-4.2%	2.4%	-6.1%	10.7%
HLAVDP- Gross	32.6%	-1.1%	4.9%	-2.4%	20.8%
HLAVDP - Net	28.6%	-2.4%	3.1%	-3.6%	17.7%

Net returns are adjusted for tax and fund management fees.

Those are the actual returns in the past five (5) years, or since inception if shorter, and are strictly the performance of the investment-linked fund. Thus, the returns are not earned on the actual premium paid of the investment-linked product.

Investment Risks

All investments carry risks. Policy Owners must be prepared to accept certain degree of risk associated with this Investment. The following are the non-exhaustive list of risks associated to this fund.

1. Market Risk

Market risk stems from the fact that there are other economy-wide perils, which threaten all businesses. It is mainly caused by uncertainties in the economy, political and social environment.

2. Liquidity Risk

Liquidity risk is the risk that the fund invested cannot be readily sold and converted into cash. This may arise when the trading volume is low and/or where there is a lack of demand for the security.

3. Credit Risk

This refers to the possibility that the issuer of a security will not be able to make timely payments of interest or principal repayment on the maturity date. The default may lead to a fall in the value of the funds.

4. Interest Rate Risk

The level of interest rates has an impact on the value of investments. Any increase in rates will lead to a fall in the value of securities, thus affecting the value of the funds.

Risk Management

The Company has in place its Authorized Investment Framework which forms part of the Risk Management process. The authority framework will cover the nature and scope of the investment authority that is exercisable by various parties in managing the Company's investments. Besides this, sensitivity and stress testing is conducted to inform the Company's management the profit & loss profiles of their investments under different pre-defined risk scenarios and the necessary action to be taken if the potential losses exceed the Company's risk tolerance level.

Basis of Unit Valuation

- The assets of every fund are to be valued to determine the value at which units of a particular fund can be liquidated or purchased for investment purposes.
- The unit price of a unit of a fund shall be determined by the Company but in any event shall not be less than the value of fund of the relevant fund (as defined below), divided by the number of units of the given fund in issue on the business day before the valuation date, and the result adjusted to the nearest one hundredth of a cent.
- The maximum value of any asset of any fund shall not exceed the following price:
 - The last transacted market price at which those assets could be purchased or sold on the business day before the valuation date; or
 - In the case of securities for which market values are not readily available, the price at which, in our Investment Manager's opinion, the asset may have been purchased on the business day before the valuation date; plus any expenses which would have been incurred in its acquisition.
- To ensure fair treatment to all unit holders, the cost of acquiring and disposing of assets is recouped by making a transaction cost adjustment to the net asset value per unit.

Exceptional Circumstances

The Company reserves the right to defer the payment of benefits (other than death benefit) under this Policy for a period not exceeding six (6) months from the date the payment would have been normally effected if not for intervening events such as temporary closure of any Stock Exchange in which the fund is invested which the Company, in its discretion, may consider exceptional.

Basis of Calculation of Past Performance

The historical performance of the fund is calculated based on the price difference over the period in consideration compared to the older price of the period in consideration.

$$\frac{\text{Unit Price}_t - \text{Unit Price}_{t-1}}{\text{Unit Price}_{t-1}}$$

Others
