HLA Venture Managed Fund (HLAVMF)

Market Review, Outlook & Strategy - Equities Market

Regional markets continued its downward spiral in August given the ongoing escalation in trade war with China's retaliation by stopping the purchase of US agricultural goods. The Chinese Yuan as a result tumbled to its lowest level in a decade as investors were worried the devaluation would continue. The US 10-year Treasury yield inversion worsened as investors were discounting a higher risk of a global recession and bet that the Fed would need to pick up its pace of interest rate cuts. Elsewhere in the UK, newly appointed Prime Minister Boris Johnson said that the Queen has agreed to his proposal to suspend Parliament and this will restrict the parliamentary oversight before the Brexit deadline which increases the probability of a hard Brexit come end-October.

The Malaysian market continued to languish during the month with 2Q19 earnings largely a disappointment with more companies missing forecasts. The earlier reduction in the Overnight Policy Rate with some impairment issues dented the banks' bottomline and plantation companies earnings continued to be dragged by the weak CPO prices. The MSCI rebalancing event which took place on 27th August saw a total net outflow of RM294m for Malaysia which was not as severe as expected as investors took advantage of the additional liquidity to trade the market. Crude oil prices slid to US\$55.16/barrel (-5% mom) on the back of continued weak demand and global growth concerns. As a result, the Ringgit has also depreciated to close at RM4.2055/ US\$ as at end August.

The FBM KLCI was down by 1.4% mom in August to close at 1,612.14 pts. FBM Emas, FBM Shariah and Small Cap declined by 2.1% mom, 0.8% mom and 4.9% mom respectively for the month of August.

Investors will be closely monitoring the trade situation as trade uncertainty clearly remains the most important issue for investors right now. Domestically, the next key event would be the upcoming Budget 2020. While it is not expected to be a major catalyst for the market, this budget will continue to be a 'people-friendly' budget focusing on the B40 segment and potentially more contracts would be announced to help spur the domestic economy. We continue to seek exposure in dividend yielding companies that are backed by stable earnings, weak Ringgit beneficiaries and potential pump priming beneficiaries.

Market Review, Outlook & Strategy - Fixed Income Market

The US Treasuries ("UST") market went through a volatile month and was responsible for nearly half of 2019's year-to-date decline in the 10-year Treasury yield. The 30-year bond yield also touched its all-time low in August, piercing the 2% for the first time in its history. The angst started when markets saw trade tensions resurface which subsequently kicked off the bond market rally in the month of August following President Donald Trump's infamous decision to impose tariffs on all remaining Chinese imports after talks between negotiators from both sides in July. This spurred a tit-for-tat escalation of import levies, drawing doubts over the possibility of a resolution to trade issues soon. On emerging markets, in the wake of Argentinian President Mauricio Macri's defeat in August, investors dumped its stocks, bonds and currency en masse, leaving investors wondering whether the country was headed for yet another default. The outcome of the election stirred speculation over the possibility that a more protectionist government would take over come December 2019 and reverse the hard-earned gains that Macri had made to regain the trust of the international markets. The debt markets are worried that his populist opponent, Alberto Fernandez and his team, will attempt to renegotiate its debts as well as its agreements with the International Monetary Fund.

In line with the movement in UST, the Malaysian Government Securities ("MGS") curve bull-flattened significantly in mid-August. After crossing 3.5% a few days before mid-August, MGS took a bullish jab, triggered by conducive global interest rate environment and lifted by positive supply-side profile. The last time the market had staged a similar move was in January 2009 and May 2013 where the 10 year MGS breached 3.4-3.5% level area and headed straight towards the 3% handle within 1-2 months. MGS yields were sharply lower led by the longer-end, driven by strong buying flows from both onshore and offshore parties. After finding support at 3.18%, the 10 year MGS yield rebounded and subsequently ended the month at 3.32%.

Apart from the first week of the month, the corporate bond space was rather muted. The month kicked off with some interest across the government guaranteed segment to the AA-part of the curve as yields continued to edge lower. New issuances that flooded the market are evidently shorter in tenure. Some of the prominent new issuances of the month include the RM850 million government guaranteed issuance by Prasarana, YNH Property's unrated perpetual bonds amounting to RM263 million with a coupon of 6.85% and Sunway Treasury Sukuk Sdn Bhd's unrated papers amounting to RM160 million.

On the global front, the global stock of negative yielding debt papers is now in excess of USD17 trillion as rising market volatility lent urgency to the unprecedented bond rally seen thus far. In the short term, we foresee more investment grade debt papers to offer sub-zero yields, as investors hope to benefit from further bearishness that would drive yields deeper into the negative territory and favourable cross-currency hedging rates and to hedge against excessive portfolio volatility from riskier asset classes. From a relative yield standpoint, we continue to expect strong interest in UST as it remains one of the few safe havens that is still providing positive returns, albeit increasingly unappealing. Despite the relatively stretched rally in the fixed income market, we continue to opine that markets will maintain their overweight stance on safe haven assets until further clarity surfaces from the various geopolitical events globally.

On the local front, while domestic liquidity remains supportive, we maintain our view that the risk-reward for MGS is increasingly unappealing. As FTSE Russell has not announced their decision of whether to remove Malaysia from their flagship index, the local bond market is expected to be rather quiet ahead of event risks in the next couple of weeks. Key events to watch include BNM's stance on the overnight policy rate in the next Monetary Policy Committee meeting and the much anticipated decision by FTSE Russell. While the recent round of liberalisation measures announced by the central bank is viewed positively, a favourable FTSE Russell decision which is expected to crystallise on the 27th September may have been largely priced in and the risk lies with fresh surprises in their decision. As such, we have taken profit on some of our MGS positions and are waiting for favourable windows for investment and trading opportunities.

HLA Venture Managed Fund (HLAVMF)

Actual Annual Investment Returns for the Past Ten (10) Calendar Years

Year	2009	2010	2011	2012	2013	2014	2015	2016	2017	2018
Benchmark	22.5%	11.6%	2.9%	7.0%	7.3%	-2.6%	-1.3%	-0.8%	6.6%	-1.9%

Net returns are adjusted for tax and fund management fees.

Those are the actual returns in the past ten (10) years, or since inception if shorter, and are strictly the performance of the investment-linked fund. Thus, the returns are not earned on the actual premium paid of the investment-linked product.

Investment Risks

All investments carry risks. Policy Owners must be prepared to accept certain degree of risk associated with this Investment. The following are the non-exhaustive list of risks associated to this fund.

1. Market Risk

Market risk stems from the fact that there are other economy-wide perils, which threaten all businesses. It is mainly caused by uncertainties in the economy, political and social environment.

2. Liquidity Risk

Liquidity risk is the risk that the fund invested cannot be readily sold and converted into cash. This may arise when the trading volume is low and/or where there is a lack of demand for the security.

3. Credit Risk

This refers to the possibility that the issuer of a security will not be able to make timely payments of interest or principal repayment on the maturity date. The default may lead to a fall in the value of the funds.

4. Interest Rate Risk

The level of interest rates has an impact on the value of investments. Any increase in rates will lead to a fall in the value of securities, thus affecting the value of the funds.

5. Country Risk

The foreign investment of a fund may be affected by the political & economic conditions of the country which the investments are made.

6. Currency Risk

This risk is associated with investments that are denominated in foreign currencies. Fluctuation in foreign exchange rates will have an impact on the value of the funds.

Risk Management

The Company has in place its Authorized Investment Framework which forms part of the Risk Management process. The authority framework will cover the nature and scope of the investment authority that is exercisable by various parties in managing the Company's investments. Besides this, sensitivity and stress testing is conducted to inform the Company's management the profit & loss profiles of their investments under different pre-defined risk scenarios and the necessary action to be taken if the potential losses exceed the Company's risk tolerance level.

Basis of Unit Valuation

- The assets of every fund are to be valued to determine the value at which units of a particular fund can be liquidated or purchased for investment purposes.
- The unit price of a unit of a fund shall be determined by the Company but in any event shall not be less than the value of fund of the relevant fund (as defined below), divided by the number of units of the given fund in issue on the business day before the valuation date, and the result adjusted to the nearest one hundredth of a cent.
- The maximum value of any asset of any fund shall not exceed the following price:
 - The last transacted market price at which those assets could be purchased or sold on the business day before the valuation date; or
 - In the case of securities for which market values are not readily available, the price at which, in our Investment Manager's opinion, the asset may have been purchased on the business day before the valuation date; plus any expenses which would have been incurred in its acquisition.
- To ensure fair treatment to all unit holders, the cost of acquiring and disposing of assets is recouped by making a transaction cost adjustment to the net asset value per unit.

Exceptional Circumstances

The Company reserves the right to defer the payment of benefits (other than death benefit) under this Policy for a period not exceeding six (6) months from the date the payment would have been normally effected if not for intervening events such as temporary closure of any Stock Exchange in which the fund is invested which the Company, in its discretion, may consider exceptional.

Basis of Calculation of Past Performance

The historical performance of the fund is calculated based on the price difference over the period in consideration compared to the older price of the period in consideration.

$$\frac{\text{Unit Price}_t - \text{Unit Price}_{t-1}}{\text{Unit Price}_{t-1}}$$

Others
