Market Review, Outlook & Strategy

Sentiment in regional markets continued to be weak during the month. Despite upbeat US economic data and the strong corporate earnings season, markets remained range-bound. Investor sentiment was weighted down by escalation of trade tensions, sharp sell-off in Turkish assets which in turn precipitated an outflow in emerging markets with sharp sell downs in Argentina, Brazil, South Africa and Indonesia. Meanwhile the ongoing US-China trade war tensions look set to intensify with US potentially imposing 25% tariffs on another US\$200b of China imports, setting in motion retaliation by the Chinese. Crude oil prices strengthened to US\$69.88/ barrel, as falling Iranian output will tighten markets once US sanctions against them take effect in November.

However, the KLCI bucked the trend, as big cap stocks rebounded with foreign selling subsiding and increased local institutional participation due to excess liquidity. However, investors were generally still cautious on the back of weaker than expected 2Q GDP growth and the disappointing 2Q18 results. Earnings disappointment came mainly from the construction, property, media and plantation sectors. The street has also started to reflect some short-term policy uncertainties post-GE 14 into corporate earnings forecasts. The Ringgit depreciated by 1.1% mom to RM4.1090/ US\$.

During the month, the KLCI recovered by 2% mom to close at 1,819.66pts. The index has recovered most of its losses from GE 14 and has generated a positive YTD return of 1.3% as at end Aug 18. Broader markets underperformed the KLCI with FTSE Emas recording a smaller return of +0.7% mom in August and FTSE Emas Shariah marginally declining by 0.03% mom. FTSE Bursa Small Cap index was down by 2.2% mom.

Going into September, investors will be keeping a close watch on newsflow on US-China trade tensions as well as the outcome of the FOMC and ECB meetings. In the local market, key events are the reimplementation of the Sales and Services Tax (SST) 2.0 on 1 Sep 18 and its impact on consumption. Newsflow on the minimum wage review and the new National Housing Policy will also be awaited. However, we note the disconnect between the recent outperformance of local equity markets as measured by the KLCI against weak GDP growth and poor corporate results. Hence we continue to be defensive going forward, focusing on blue-chips with sustainable earnings and steady dividend yield and exporters benefiting from the US-China trade tensions such as the technology sector. We will continually re-look sectors that have de-rated substantially post the outcome of the general election that continue to have positive earnings growth.

HLA Venture Growth Fund (HLAVGF)

Actual Annual Investment Returns for the Past Five (5) Calendar Years

Year	2013	2014	2015	2016	2017
Benchmark	10.5%	-5.7%	-3.9%	-3.0%	9.5%
HLAVGF- Gross	16.3%	-3.2%	-0.6%	-0.1%	26.0%
HLAVGF - Net	13.6%	-4.4%	-1.9%	-1.5%	22.5%

Net returns are adjusted for tax and fund management fees.

Those are the actual returns in the past five (5) years, or since inception if shorter, and are strictly the performance of the investment-linked fund. Thus, the returns are not earned on the actual premium paid of the investment-linked product.

Investment Risks

All investments carry risks. Policy Owners must be prepared to accept certain degree of risk associated with this Investment. The following are the non-exhaustive list of risks associated to this fund.

1. Market Risk

Market risk stems from the fact that there are other economy-wide perils, which threaten all businesses. It is mainly caused by uncertainties in the economy, political and social environment.

2. Liquidity Risk

Liquidity risk is the risk that the fund invested cannot be readily sold and converted into cash. This may arise when the trading volume is low and/or where there is a lack of demand for the security.

3. Credit Risk

This refers to the possibility that the issuer of a security will not be able to make timely payments of interest or principal repayment on the maturity date. The default may lead to a fall in the value of the funds.

4. Interest Rate Risk

The level of interest rates has an impact on the value of investments. Any increase in rates will lead to a fall in the value of securities, thus affecting the value of the funds.

5. Country Risk

The foreign investment of a fund may be affected by the political & economic conditions of the country which the investments are made.

6. Currency Risk

This risk is associated with investments that are denominated in foreign currencies. Fluctuation in foreign exchange rates will have an impact on the value of the funds.

Basis of Unit Valuation

- The assets of every fund are to be valued to determine the value at which units of a particular fund can be liquidated or purchased for investment purposes.
- The unit price of a unit of a fund shall be determined by the Company but in any event shall not be less than the value of fund of the relevant fund (as defined below), divided by the number of units of the given fund in issue on the business day before the valuation date, and the result adjusted to the nearest one hundredth of a cent.
- The maximum value of any asset of any fund shall not exceed the following price:
 - The last transacted market price at which those assets could be purchased or sold on the business day before the valuation date; or
 - In the case of securities for which market values are not readily available, the price at which, in our Investment Manager's opinion, the asset may have been purchased on the business day before the valuation date; plus any expenses which would have been incurred in its acquisition.
- To ensure fair treatment to all unit holders, the cost of acquiring and disposing of assets is recouped by making a transaction cost adjustment to the net asset value per unit.

Exceptional Circumstances

The Company reserves the right to defer the payment of benefits (other than death benefit) under this Policy for a period not exceeding six (6) months from the date the payment would have been normally effected if not for intervening events such as temporary closure of any Stock Exchange in which the fund is invested which the Company, in its discretion, may consider exceptional.

Basis of Calculation of Past Performance

The historical performance of the fund is calculated based on the price difference over the period in consideration compared to the older price of the period in consideration.

$$\frac{\text{Unit Price}_t - \text{Unit Price}_{t-1}}{\text{Unit Price}_{t-1}}$$

Others
